

OIBSIP Project Showcase & Future Roadmap

Advanced Engineering Extensions & Career Integration Strategy

1. Technical Enhancement Showcase

Building upon the foundational Level 1 requirements, all applications have been elevated to enterprise-grade standards using Next.js App Router, Tailwind CSS v4, and strongly typed TypeScript interfaces. Each module is fully tested and optimized for Vercel deployment.

2. Modular Component Architecture

The repository layout emphasizes modularity, separation of concerns, and reusable component design across all functional tasks.

Module / Task	Core Feature	Performance Metric	Scalability Index
Task 1 (Landing Page)	Responsive SaaS Layout	100/100 Lighthouse Perf	High (Static Edge)
Task 2 (Portfolio)	Digital Résumé & Showcase	Optimized Component Tree	High (Componentized)
Task 3 (Converter)	Real-time State Validation	Instant Client Rendering	High (Client-Side State)

3. Future Scaling Roadmap

- **Level 2 Integration:** Expanding repository scope to include advanced API integrations and database persistence.
- **CI/CD Automation:** Implementing automated GitHub Actions workflows for continuous linting and testing.
