

OIBSIP Repository Architecture & Overview

AICTE Oasis Infobyte Internship Program • Web Development Track

1. Executive Summary

This repository (`OIBSIP`) serves as the centralized workspace and submission portfolio for Lakshya Kurup during the Oasis Infobyte Internship Program. It houses production-ready web applications, structured source code directories, and comprehensive technical documentation.

2. Technical Stack & Architecture

The projects in this repository are engineered using modern, industry-standard web development frameworks and toolchains:

- **Frontend Framework:** Next.js 15 (App Router) with React 19 for component-driven architecture and static/dynamic rendering.
- **Styling & Design:** Tailwind CSS v4 for clean, responsive, monochrome-aligned visual aesthetics and flexible grid layouts.
- **Language & Tooling:** Strongly typed TypeScript for robust code maintainability, Node.js runtime, and Git version control.

3. Directory Structure

Each task is cleanly isolated within its own dedicated directory containing its complete source code, configuration files, and localized README documentation.

Directory	Project Name	Tech Stack	Status
lakshya_task1/	SaaS Landing Page (NexusCloud)	Next.js, Tailwind CSS	Completed & Verified
lakshya_task2/	Personal Portfolio	Next.js, Tailwind CSS	Completed & Verified
lakshya_task3/	Temperature Converter	Next.js, TypeScript, React	Completed & Verified
