

OIBSIP Level 1 Task Implementation Guide

Detailed Breakdown of Web Development Tasks 1, 2, and 3

Task 1: SaaS Landing Page (``lakshya_task1``)

Designed for 'NexusCloud', this modern landing page features a fixed responsive navigation bar, a high-converting hero section with call-to-action buttons, a 3-column feature grid highlighting deployment speed, enterprise security, and scalability, and a professional footer.

Task 2: Personal Portfolio (``lakshya_task2``)

Serving as a digital résumé, this portfolio highlights professional identity ('Lakshya.dev'), role title as a Full-Stack Developer & AICTE Intern, an About Me summary, technical skills breakdown, and interactive project cards linking back to repository deliverables.

Task 3: Temperature Converter (``lakshya_task3``)

An interactive client-side utility built with React state hooks (``useState``) that performs real-time bidirectional conversion between Celsius, Fahrenheit, and Kelvin. Includes rigorous input validation and safeguards against physical absolute zero limit violations (-273.15°C, -459.67°F, 0K).
